Oops, guess what? If you stayed for 30 minutes listening to this video, you just gained 5 euros worth of Compuceeds.

Virtual Prepaid Cards: What can I do with these?

I was on our Facebook Page when one question caught my attention: I am sure someone has asked this, since I was asked, and did not have an answer: what can all these cards be used for? What can they buy with them?

As of now, our virtual prepaid cards are used to load funds to our Cryptoceeds eWallet, Compumatrix Social Network and Trading Portal. It is Cryptoceeds eWallet that can be used to buy stuff from our merchant partners online and offline.

However, we are still in the process of growing our merchant base. We are also at the stage of growing our customer base. We are doing this by providing incentives to members join in us by becoming our market makers and distributors of the virtual prepaid cards.

We believe that by providing incentives, we are able to increase the customer base for merchants and thus attract more merchants to start accepting our Cryptoceeds eWallet as a form of payment.

Like Network Marketing companies, we spend less on advertising in order to provide members the ability to earn while creating a buzz which we expect to attract more members to join our revenue sharing program.

The main goal of the cards is to simplify the process by which people pay online by creating more venues for them to fund their accounts. They certainly don't have to go to a bank or remittance service to send, obtain a credit card or debit card and not to mention pay the fees. We want them to be able to go to their next door neighbor, a neighborhood store, a merchant or just an associate like yourself. The goto person or place for people to buy a card from, so that they can redeem the code to fund their account which they use to spend online without having to pay hefty fees.

One fact we have to face as a startup is that Cryptoceeds eWallet was just launched recently and of course like any other program, nobody knows about it except for its founding members and owners. The first thing that merchants want from any payment method is a great number of members they can serve as prospective customers which will eventually become their customer. On the other hand, customers want to use a payment method which has a lot of merchants to buy from. We don't have both. So why do we have the virtual prepaid cards? What can we do? We then create value for using the cards which then turns these cards into a marketing tool and an online business that

increases both number of merchants and customers by allowing them to earn from us through our revenue sharing and monetization platforms. Customers becomes our members first enjoying the benefits and perks of distributing our cards on a global scale. It is the tool that creates the buzz which solves our need to increase our membership base.

While it is true that Cryptoceeds eWallet don't have any use for merchants as of yet, it can be used to grow your earnings via the trading portal while at the same time growing our membership base who works as market makers and distribution channels. With the cards, we can grow at a rapid pace. The cards not only increases our membership base and merchant partners but it also brings us an astronomical revenue growth which can further use to provide better services, faster settlements and a lot more that will come our way.

You are all lucky to be part of this point in time where you will be able to see your income or earnings grow together with the company.

Something to Ponder On

This morning like any other mornings, my inbox is full. As I begin to skim through all the subject lines, one caught my attention and has inspired me to write an answer and share it to everyone here with hopes that this would be another lesson for each one of you who are in business with us. Knowledge is power. You will encounter customers that will always have something to say against your business. And thus, you must equip yourself with answers. First of all, thank you to the one who sent this email.

The inquiry:

Just a little feedback on the Portal time line. We were advised initially the the Portal would be a way of getting paid while we were waiting for the US funds to be released. Dave suggested today that we are hoping by end of September or October. Now the latest time line for the Portal suggests the payouts will be about 3 weeks in to October. Within an hour after the time line was posted I personally had at least 6 members that were very very disappointed to say the least. Henry we were lead to believe payouts would be much sooner.

The only reason I have heard is that Compumatrix is probably waiting for more cash to come in before we are paid. I hope there is a better reason. I don't like the Peter to pay Paul syndrome if that is true. Just my feedback.

My answer:

First of all, the 21-day processing time or payment timeline after the consolidation of estimated earnings at the end of the month is obviously required for accounting and audit purposes. We need to justify your earnings during that time frame by validating each and every transaction made, cards produced and inventory sold. It is apparent that the earning potential on our system is beyond compare and rather falls on the "too good to be true" side and we have to prepare all these reports carefully and ensure transactions during the month of your business operations are properly accounted for. Any adjustment, debit or credit will be posted before it becomes your FINALIZED earnings that you deserve to be paid for in cash. I know some would be disappointed but we have to follow regulations. Besides, you have nothing to lose during the wait but more to gain.

As for your Peter pays Paul concept, you are forgetting one thing. Why is Peter paying Paul? Remember that on this scenario Paul is in the business of selling virtual prepaid cards. This can be compared to Paul selling slices of cake. The main reason why Peter pays Paul is because Peter is buying

the card from Paul. A Consumable Virtual Product that allows him to fund his account online to spend on products and services which would satisfy him as a paying customer. Unlike, a scam, ponzi or pyramid scheme, you only pay or spend money to serve selfish interests. No product or service is involved. Operators just collect funds and distribute it to satisfy the greed of every participant of the scheme in order for the scheme to progress.

In a legitimate direct selling business, you have to sell your product to earn. No sales, no earnings. No effort, no progress.

Both legal and illegal ways thread on the same ground when it comes to exerting effort and marketing. But the question is, what do you get when you join the illegal way? A promise for a quick buck.

In legal ways, you don't get a promise because the promise should come from you as the owner of your online business. You are marketing to attract customers, exerting effort, selling for the main purpose of meeting your business objectives as a Virtual Prepaid Card distributor. And you are rewarded for it with our simple compensation plan. Compumatrix is not waiting for cash. In fact, we don't need cash at this point in time. But you do. That is why we are here to serve by providing you the technology and mechanism enabling your business to collect from customers buying your cards and get paid commissions for it. You need customers for your business to buy your cards in order for your business to thrive. If you can't get your business customers to come to you, reassess your goals and reasons why you decided to put up or be in this business in the first place. Continue to learn. Read our blogs. Join our Learning Sessions and Webinars. We are here to always help your business succeed.

Is It Better To Buy Online or Not?

According to survey conducted by Global/ Webinex, a person can consume an average of 6.5 to 8 hours of internet surfing per day. Knowing this fact may not surprise the many since some people might see this as the least number of hours they can consume per day. They may want to say, *"Welcome to the Digital Age"*.

As the digital age enters, online shopping or online buying also emerged. Tons of online shopping websites popped up one after another. And these entities are purely dedicated to making online shopping easy and relatively cost effective. It is not that hard to understand the potential benefits it would cause to the business and consumers. But at the same time there are still contradicting factors that let people think, *"Is it better to buy online or not?"*

Let us site some online buying Pros and Cons

Pros:

1. Saves Time, Gas and Hassle

Whenever or wherever you are, for as long as you have an internet usage support, you can place an order anytime and at any place you want. Online shopping saves your:

Time – No need to waste time in freshening up and visiting malls

Gas – No need to drive to a shopping mall

Hassle – No need to go on sale and be pushed by shoppers.

2. Easy Product Comparison

Shopper would now have the opportunity to check out and compare products they want through online shopping. Internet gives you access to tons of information you would want to know about a certain product. Making it easy for shoppers to compare, decide and purchase any item.

3. 24/7 Open

You might experience shopping for an important occasion but then the boutique where you want to buy the stuff just close. It feels frustrating right? But with the online shops, no need to be frustrated anymore. They are open 24 hours of the day, and 7 days of the week.

4. Reviews

Offline or online stores, one should be thankful if these have customer reviews. It helps the company to improve and develop tactics to gain more sales and to know what their consumers think of them as a service or product provider. On the part of the consumer, it practices them to identify what shop considers their thoughts and ideas. With this, they can figure out which shop really cares out of those who did not.

Cons:

1. Waiting Time

One of the issues concerning online buying is the consumer's waiting time for the product to arrive. As a consumer, one might feel uneasy knowing that they already paid for the product not knowing how many days should pass for them to actually see and use it.

2. Shipping Cost

Better check first if the shipping cost more than actually visiting a shopping mall to purchase an item. Some usually fall into the trap of paying more shipping fee than the item they purchased.

3. Deal with it? Or have a hard time sending it back

It's not that easy to return an item that has been delivered to you with damage. Some might say that it has been packaged in good condition and might have been damaged during delivery. Don't accept such excuse. Report it immediately, but then again, it might took too much time replacing and delivering it again to you.

4. No room for testing

You won't be having a chance to try the product you purchase. All you need to trust is your instinct and your guts that it will perfectly work somehow.

Everything in this world has its pros and cons. And it's up to the wise buyer to choose between the traditional or the online type of purchasing. Let's just be thankful that we are discovering way to make our lives much easier. But remember, too much tasting of something good can also be bad enough.

How to turn Compuceeds to Cash

Obtaining the Virtual Currency Compuceed can be done in various ways. However, turning it to cash is what makes it a virtual currency derived from hard work.

1. By earning activity points

This is by far the easiest way for you to avail of Compuceeds without the need to spend real cash. However, it takes some time for you to do so.

Activity points can be earned by contributing content to the social network. You may also earn it by installing the World Community Grid software. Take note also that by contributing content, your task doesn't end by just submitting the content. You would need to have people reading or visiting your content. This is why it is important for you to have other social media accounts such as Facebook, Twitter, LinkedIn, Google Plus or Pinterest.

After earning the activity points from our social network, this should be converted into the in-house virtual currency. You can use this to purchase products and services within the marketplace. That is, if such product or service you need exists. Otherwise, you have to monetize your virtual currency by producing a virtual prepaid card that needs to be lined up at the global inventory. You may also sign up for an account to sell your own inventory using affiliate programs like JVZoo.com where your affiliates can focus on disposing your Virtual Prepaid Cards in order to earn at least 20% sales commission from the Suggested Retail Price and you receiving your capital plus 10% of the SRP in cold cash through Paypal.

2. Buying a Virtual Prepaid Card

Buying a virtual prepaid card allows you to load your social networking account with the in-house currency. By doing so, you don't have to contribute content or install programs to earn activity points. But, you will still need to monetize it and market the cards.

3. Peer to Peer Trading

This method of availing cash is by far the fastest way. But it would require some marketing and selling skills. In order to be able to this, you need to build a following and train them about the virtual currency industry. And how virtual currency can be a large revenue earner for them both in terms of treating it like a commodity or as an equity.

What is Compuceeds and how can it help businesses better than any Payment Processor?

The Compuceed on
the Cryptoceeds
eWallet

We've heard about Bitcoins and all the rest of Bitcoin wannabes. Have you heard about the virtual currency Compuceeds?

Both online and offline Businesses everywhere are being enticed with a new type of virtual currency called Compuceeds. This new virtual currency was invented in 2007 and is created and produced at the Compumatrix Social Network where it got its acronym Compuceeds (Compumatrix Proceeds). Unlike other virtual currencies, Henry James Banayat, Compuceeds's creator, developed it in such a way that transactions are centralized and not let users use anonymous names. There are also no banks involved in Compuceeds transactions, which means zero transaction fees. Can this be good news for businesses?

What is Compuceeds?

Compuceeds is a digital currency, primarily used to make online purchases and it is also being used by offline businesses. Consumers using Compuceeds store it on their [Cryptoceeds eWallet](#). It can be accepted as a form of payment to purchase anything from digital services to tangible goods. Compuceeds provides merchants with a way of receiving instant payments by way of peer-to-peer technology using the Cyclos platform developed by the Social Trade Organization (STRO). Social Trade Organization (STRO) provides communities innovative solutions that increase the purchasing power through new forms of money. Compuceeds are managed by Compumatrix and use the Cyclos platform on a global scale.

In other words, there are no government agencies and central banks involved. This alone sets Compuceeds apart from digital payment processing gurus like Paypal and digital wallet companies such as Google Wallet. This new virtual payment technology allows merchants to accept digital payments, much like credit card payments, without the added associated processing fees.

Why Compuceeds for Businesses?

Because consumers can buy merchandise using Compuceeds, the premise is that this may help to increase their sales both online and offline.

Technically, Compuceeds transactions are recorded centrally and does not disclose a public log thus keeping transactions truly private.

Compuceeds vs Payment Processors for Business Payment Processing

When consumers buy goods and services using Compuceeds, they're paying with virtual cash. This is much like the idea behind Payment Processors, where the money is placed in the merchant's account instantly. However, there are some major differences between Compuceeds and Payment Processor:

Frozen Accounts – Thousands of online merchants have had to deal with the issue of Payment Processors freezing their accounts for various reasons. When this happens, the online payment processor rarely returns the money left in those frozen accounts. Because of the global consensus of no chargeback and no freezing policy, Compuceeds has no reason to freeze accounts based on shared IP addresses, identification verifications, etc...

Fees – Payment Processor fees can run anywhere from 3% to 9%, depending on the transaction. There are also some serious conversion fees involved with international transactions. Compuceeds currently charges no fees whatsoever for their services. Businesses can save substantial amounts in virtual payment processing fees alone using Compuceeds.

Pegged to a Dollar – The value of each Compuceed is not traded like cryptocurrencies as consumers using this virtual currency abide by a **global consensus** that the value may not be sold nor traded among peers at an amount lower than \$1.00.

Global Access – There are currently numerous countries that do not allow their consumers to utilize the services of a Payment Processor, in any way, shape or form. Compuceeds can be used by any consumer anywhere in the world. This makes it very easy, and financially feasible, for businesses to sell goods and services internationally.

Irreversible Charges vs Chargebacks

So, should businesses fear buyers using Compuceeds?

Compuceeds transactions are not only secure, but they are 100% irreversible. This ensures that merchants are protected from losses resulting from fraudulent chargebacks and other fraud-related activities. Policies such as this allow businesses to expand into markets where fraud rates are exceptionally high or credit card payments aren't available.

Payment Processors like Paypal is infamous for its “buyer protection” policies. But, these policies are not always in the best interests of their merchants. Many businesses have lost revenue do to fraudulent chargebacks being granted by Payment Processor. Compuceeds gives merchants more peace of mind with their “all transactions are final” policy.

How Do You Feel About Compuceeds Payments?

Have you used Compuceeds to make online purchases? Are you a business owner or manager thinking about accepting Compuceeds payments for your goods or services? We’d love to hear your thoughts on how Compuceeds can help your business to grow in 2014.
